## Memorandum

Date: January 16, 2007  
To: Gary Morin / Mark Anderson  
From: Ken Heim / Ryan McCarthy / Steve Wolf  
Subject: October 2006 Aerovox Groundwater Sampling Results

The following technical memorandum summarizes groundwater sampling activities conducted at the Aerovox site in October of 2006. The recent sampling and analysis at the site is a continuation of a groundwater sampling program that was initiated in September of 2005, the results of which were recently reported as part of a Conceptual Site Model of the Aerovox property (ENSR, 2006).

The monitoring wells at the Aerovox site were installed across the site during the initial investigations performed in the early 1980's (Gushue and Cummings, 1984). It is not known how many monitoring wells were initially installed, but today thirteen wells remain in service. The wells are scattered around the Aerovox site but are mostly concentrated at the east side of the site near the Acushnet River to facilitate the monitoring of groundwater within the most contaminated soils. There are a total of five well pairs within the network of monitoring wells, located at the east side of the site near the Acushnet River. Three individual wells are located near the middle and west side of the site (Figure 1).

**Figure 1: Map showing locations of 13 existing monitoring wells at Aerovox site.**

During the sampling survey conducted in September of 2005, ENSR sampled each of the 13 wells indicated in Figure 1. Prior to sampling the monitoring wells in October 2006, continuously recording water level meters were installed in the MW-7/7A well pair to re-evaluate the connectivity between the surface and lower aquifers and the tidally influenced Acushnet River. Water levels were measured using the same methods described in the Conceptual Site Model report (ENSR, 2006) except that the water level in the Acushnet River was obtained from the predicted water levels available from NOAA for the New Bedford Harbor area. Figure 2 presents a graphical representation of the water levels in the surface aquifer (well MW-7A), the lower aquifer (well MW-7), the Acushnet River, and the rainfall measured at the New Bedford Airport during the deployment. The results of the water level measurements indicated a similar level of connectedness between the lower aquifer and the Acushnet River and the isolation of the surface aquifer from the tidally varying river.

The recent sampling conducted in October of 2006 used the same methods employed during the survey of September 2005 (ENSR, 2006) but did not include wells MW-2A or MW-3. The following four tables describe the results of the groundwater sampling conducted in October of 2006.

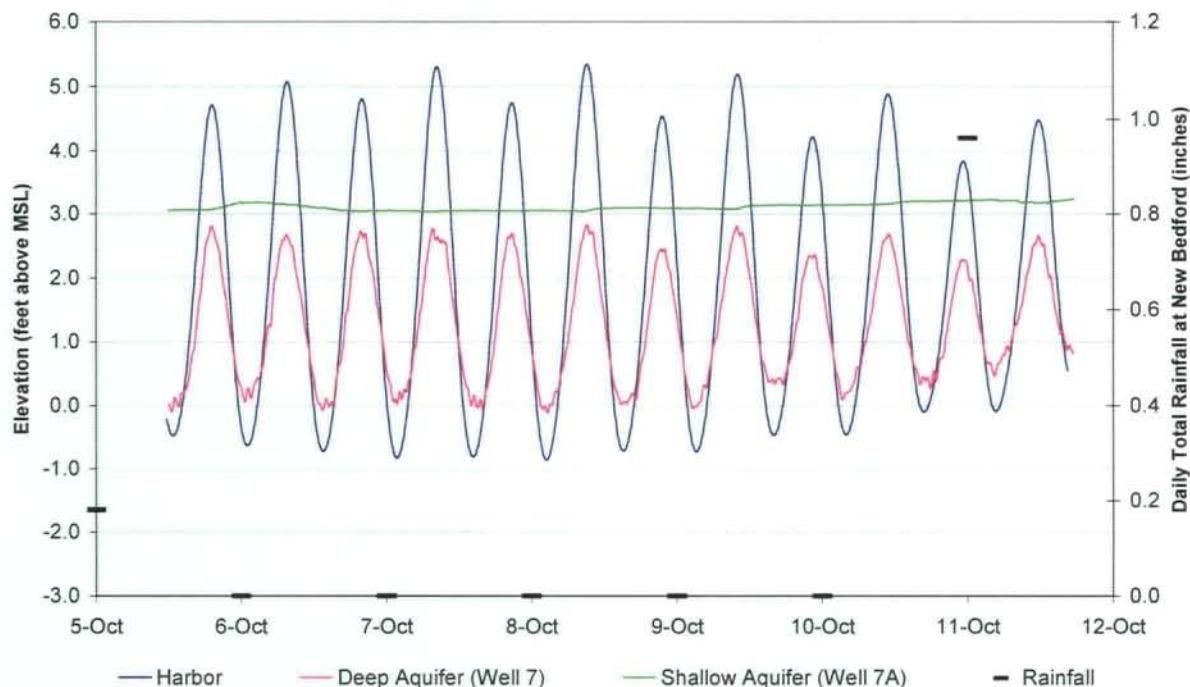

- Table 1 is a summary of the measured water elevations in each of the 11 monitoring wells. The elevations in the shallow aquifer wells are consistently about half a foot lower than in September 2005 and are generally higher in the lower aquifer wells by about the same amount. Because of the demonstrated connectedness between the lower aquifer and Acushnet River water levels, the difference in groundwater levels may be attributed to the tidally induced variability.
- Table 2 is a summary of the total Aroclor PCBs measured in each of the 11 sampled monitoring wells. The results are generally similar to the surveys from September of 2006 (ENSR, 2006) and from 1998 (BBL, 1998) in terms of which wells had detectable concentrations. The highest concentration was again measured at MW-6, but was a factor of three times higher than the 2005 measurements.
- Table 3 is a summary of the in-situ measurements collected during the sampling survey conducted in October of 2006. The results indicate that the specific conductivity and pH are generally consistent with measurements made during the September 2005 survey and that turbidity values were reasonably low immediately prior to collection of the groundwater sample. Also, most of the samples were clear and had no detectable petroleum odor.
- Table 4 is a summary of the total VOCs measured during the sampling survey conducted in October of 2006. The results indicate that the highest concentrations were present in wells MW-4B, MW-6, MW-7, and MW-8S and that the dominant compounds are chlorobenzene, trichloroethene, 1,2-dichloroethylene, cis-1,2-dichloroethene, and vinyl chloride, which is all consistent with the results of the sampling from September of 2005. A full set of the individual VOCs are provided in Attachment 1.

With little exception, the results of the October 2006 groundwater sampling were consistent with the results of the September 2005 sampling. One notable difference is that the maximum total PCB concentration of 35 µg/L, measured in well MW-6 in September 2005, increased to 120 µg/L in the October 2006 sampling. A complete set of the sampling results are included as Attachment 1 to this letter report.

**Table 1: Summary of water levels measured in monitoring wells**

Aquifer	Well ID	Date	Time	Tide Stage (feet MSL) <sup>1</sup>	Water Level Elevation (feet MSL)
Shallow Aquifer	MW-3A	10/12/2006	12:05	1.8	2.03
	MW-4A	10/12/2006	14:50	0.8	3.33
	MW-6A	10/11/2006	11:05	2.1	2.50
	MW-7A	10/12/2006	9:35	0.0	3.29
	MW-8S	10/11/2006	16:15	-1.5	2.06
Lower Aquifer	MW-2	10/11/2006	17:40	-1.9	1.29
	MW-4	10/12/2006	13:45	1.6	2.67
	MW-4B	10/11/2006	14:40	-0.2	2.29
	MW-5	10/11/2006	9:30	1.0	2.28
	MW-6	10/11/2006	12:50	1.8	2.61
	MW-7	10/12/2006	10:40	0.8	1.64

<sup>1</sup>Tidal elevations are NOAA predicted tides for New Bedford Harbor Massachusetts.

**Table 2: Summary of total Aroclor PCB concentrations measured in monitoring wells**

Aquifer	Date	Well ID	Total PCB <sup>1</sup> Concentration (ug/L)
Shallow Aquifer	10/12/2006	MW-3A	< 0.35
	10/12/2006	MW-4A	0.75
	10/11/2006	MW-6A	< 0.35
	10/12/2006	MW-7A	< 0.35
	10/11/2006	MW-8S	0.81
Lower Aquifer	10/11/2006	MW-2	< 0.35
	10/12/2006	MW-4	< 0.35
	10/11/2006	MW-4B	1.35
	10/11/2006	MW-5	< 0.35
	10/11/2006	MW-6	120
	10/12/2006	MW-7	< 0.35

<sup>1</sup>Total Aroclors is the sum of (Aroclors 1016, 1221, 1232, 1242, 1248, 1254, and 1260); when all aroclors were ND the value indicated is the sum of al detection limits, when one or more aroclors was detectable the value indicated is sum of the reportable concentration(s) plus half of all other detection limits.
